

Wilmar T. Macheke

Full-Stack & Backend Developer | Fintech & Systems Engineering

Harare, Zimbabwe | axecrow12@gmail.com | +263 781 465 862 | github.com/axecrow-12 | [Portfolio](#)

PROFESSIONAL SUMMARY

BTech Software Engineering student at the Harare Institute of Technology (Expected August 2028) with demonstrated ability to design, build, and deploy production-grade software. Built and delivered a custom real-time Point of Sale system for a live business, independently architecting the full stack from React frontend to Spring Boot backend. Pursuing industrial attachment in fintech, banking, agri-tech, or telecoms, with a focus on backend systems, REST API development, and full-stack application delivery.

EXPERIENCE

IT Intern (Part-Time) | The Level Up Lounge: Harare, Zimbabwe | November 2025 – February 2026

- Sole developer responsible for end-to-end design and delivery of a custom Point of Sale (POS) system to address security and accountability concerns identified in daily operations
- Built a real-time transaction recording system using React (frontend) and Spring Boot (backend), enabling the business owner to monitor all sales activity as it occurred and cross-reference with CCTV footage to verify session accuracy
- Delivered a complete working system independently, managing requirements gathering, architecture decisions, and deployment without a supporting team
- Stack: React, Spring Boot, Java, REST APIs: see github.com/axecrow-12/level-up-lounge

SELECTED PROJECTS

Level Up Lounge POS React · Spring Boot · Java · REST APIs [[GitHub](#)]

- Custom-built POS system for a live arcade business; sole developer from requirements to deployment
- Real-time transaction dashboard allows owner to monitor sales and correlate records with CCTV footage for fraud prevention
- Demonstrates end-to-end ownership: system design, API development, frontend integration, and business-facing delivery

KuraVizor: Farm Intelligence Platform Next.js · TypeScript · Spring Boot · PostgreSQL · On-device ML [[GitHub](#)]

- Offline-first agricultural intelligence platform built for smallholder farmers in low-connectivity rural environments
- Integrates on-device machine learning for crop disease detection and predictive analytics without requiring consistent internet access
- Live deployment at kuravisor.vercel.app; backend includes full Postman API test suite demonstrating production-readiness
- Directly relevant to agri-tech and rural fintech sectors targeting underserved markets

Agrovia Agricultural Marketplace Java · Spring Boot · React · MySQL [[GitHub](#)]

- Farmer aggregation and marketplace platform enabling resource sharing, group buying, and direct farmer-to-consumer trading
- Includes predictive pricing analytics dashboard giving farmers data-driven market visibility
- Collaborative project demonstrating team-based backend development in a structured repository environment

LocationTracker: Android Geofencing App Java · Android SDK · Google Maps API · Geofencing API [[GitHub](#)]

- Android application providing live GPS tracking, geofence registration, saved location management, and turn-by-turn navigation
- Uses FusedLocationProviderClient and Geofencing API with local Room database persistence and push notification triggers on geofence entry
- Relevant to telecoms and fleet management use cases in location-aware mobile systems

Tap & Pay: Mobile Payment Platform (Concept & Design) Java · Spring

Boot · PostgreSQL · REST APIs [\[GitHub\]](#)

- Designed architecture for a secure mobile payment platform integrating with multiple payment providers and banking APIs
- Key features: real-time transaction monitoring, fraud detection algorithms, risk scoring, suspicious activity alerts, and scalable third-party API integration
- Directly aligned with fintech and banking sector attachment targets

EDUCATION

BTech in Software Engineering | *Harare Institute of Technology* | *Expected August 2028*

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Java, Python, HTML5, CSS3, SQL

Frontend: React, Next.js, Vite, Tailwind CSS, SCSS, Responsive UI Design

Backend: Spring Boot, Node.js, REST API Design, JWT Authentication, Microservices

Mobile: Android (Java), React Native, Google Maps API, Geofencing API

Databases: MySQL, PostgreSQL, Prisma ORM, Room Database (Android), Firebase

Tools & Platforms: Git, GitHub, GitLab, Docker, Postman, VS Code, Android Studio, Vercel

Core Competencies: Full-stack application delivery, REST API architecture, fraud detection systems, offline-first design, solo project ownership, agile collaboration

axecrow12@gmail.com | +263 781 465 862 | github.com/axecrow-12

Dear Hiring Manager,

I am writing to apply for an industrial attachment position within your organisation. I am currently pursuing a BTech in Software Engineering at the Harare Institute of Technology (Expected August 2028), and I am eager to contribute in a professional environment where technology drives real impact particularly in fintech, banking, agri-tech, or telecoms.

What distinguishes my profile is not just academic coursework, but a track record of building production software that solved genuine business problems. While working part-time at The Level Up Lounge, I identified a security and accountability gap in their daily operations and independently built a custom Point of Sale system from scratch — architecting the React frontend, Spring Boot backend, and real-time transaction dashboard entirely on my own. That system is live, documented, and publicly available on GitHub.

My project portfolio further demonstrates the depth and breadth of this experience. KuraVizor is a deployed, offline-first farm intelligence platform built with Next.js, TypeScript, and on-device ML directly relevant to agri-tech contexts. My Tap & Pay concept explored fraud detection, real-time transaction monitoring, and scalable payment API architecture exactly the kind of thinking valued in fintech and banking environments. I have also built Android applications integrating the Google Maps and Geofencing APIs, and collaborated on a multi-developer agricultural marketplace platform.

I am comfortable working across the full stack from database schema design and REST API development in Spring Boot and Node.js, to frontend delivery in React and Next.js. I am equally comfortable working independently on an end-to-end deliverable or contributing within a structured engineering team.

I would welcome the opportunity to discuss how my technical background and project experience can contribute to your team. Thank you for your time and consideration.

Yours faithfully,

Wilmar T. Macheke

BTech Software Engineering Student Harare Institute of Technology

Harare
Institute of
Technology

The Human Resources Manager

Dear Sir / Madam

Re: INDUSTRIAL INTERNSHIP: HARARE INSTITUTE OF TECHNOLOGY:
SOFTWARE ENGINEERING DEPARTMENT.

The Harare Institute of Technology offers a four-year Bachelor of Technology Honors Degree in Software Engineering. For at least eight months of that period the student must be on Industrial Internship to gain hands on experience and familiarization with the real world. The Industrial Attachment is a mandatory requirement for the partial fulfillment of the degree programme.

It is against this background that the Software Engineering Department is requesting your assistance in securing attachment in your organization for **Macheke Wilmar T. Reg no H240239Z**. Ideally, the internship period is from July 2026 to June 2027.

For further information do not hesitate to contact the undersigned at wmakondo@hit.ac.zw or the School Administrator at sharuzivishe@hit.ac.zw.

Your assistance is greatly appreciated by the Institute.

Thank you.

W. MAKONDO (Eng)
Chairperson, Software Engineering
